Software Installation Request Automation

Customer Journey Map (ServiceNow Service Portal)

Scenario

An employee requests software through the ServiceNow portal, obtains the required approval, and receives installation fulfillment from IT.

	1. Awareness Learn how to request approved software	2. Login to ServiceNow Open the ServiceNow employee portal	3. Submit Request Choose software and enter request details	4. Approval Review Request is routed to the approver	5. Approval Decision Approver reviews and records a decision	6. IT Fulfillment IT reviews the request and installs software	7. Status Tracking Monitor request and fulfillment progress	8. Installation Complete Receive confirmation and verify installation	9. Feedback & Support Share feedback or report an issue
Customer Actions	Find the software request option and review available guidance	Open the portal and sign in with work credentials	Select software, provide business need, device and required details	Submit the request and wait for approval routing	Approver checks the request and approves or rejects it	IT validates the request and completes the installation	Check request status and respond if more information is needed	Confirm the software is installed and accessible	Provide feedback or contact IT for assistance
Touchpoints & Interactions	IT service guidance, software catalogue and support information	ServiceNow login page and employee Service Portal	Software catalog item, request form and submission confirmation	Flow Designer workflow and approval task	My Approvals, approval record and email or portal notification	IT fulfillment task, assignment group and installation process	My Requests page, request record and status notifications	Fulfillment update and completion notification	Feedback channel, service desk and request record
Goals & Motivations	Understand which software can be requested	Access the request process securely	Provide complete and accurate request information	Get the request to the correct approver promptly	Receive a clear and timely approval decision	Get the requested software installed correctly	Know the current status without repeated follow-ups	Use the installed software successfully	Resolve issues and improve the request experience
Positive Moments	Clear guidance about the request process	Convenient access through one portal	Standardized form captures required information	Automatic routing reduces manual hand-offs	Approval decision is visible in the request	IT fulfillment is tracked in ServiceNow	Status updates provide better visibility	Completion confirmation closes the request loop	A clear support path is available
Pain Points	Employees may not know which software is available	Login or access problems can block the request	Missing or unclear details can delay processing	Approval routing may be delayed or unclear	Approver may not notice a pending approval	Installation may take time or require clarification	Limited visibility can lead to repeated follow-ups	User may be unsure when installation is complete	Issues may not be captured consistently
Opportunities for Improvement	Publish approved software details and request guidance	Provide clear portal access and sign-in instructions	Use mandatory fields and helpful form descriptions	Automate approval assignment and notifications	Send reminders and show approval status clearly	Assign fulfillment tasks and record completion details	Provide status tracking and automated updates	Notify the requester when fulfillment is complete	Collect feedback and use it to improve the workflow
