PROJECT DESIGN PHASE – II

Solution Requirements (Functional & Non-functional)

Date	25-09-2026
Team ID	
Project Name	Software Installation Request Automation (ServiceNow)
Maximum Marks	4 Marks

Functional Requirements

Following are the functional requirements of the proposed Software Installation Request Automation ServiceNow Service Portal.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Software Catalog Access	Display available and approved software with descriptions, supported platforms, versions, and relevant request information.
FR-2	Software Request Submission	Allow employees to select software and submit a standardized request through the ServiceNow Service Catalog item.
FR-3	Requester Details Capture	Capture requester details, requested software, business justification, device or system information, and other required inputs.
FR-4	Form Validation	Validate mandatory fields and display clear messages when required information is missing or invalid.
FR-5	Request Record Creation	Create a ServiceNow request and associated requested item record after successful submission; provide a unique request reference.
FR-6	Approval Workflow	Automatically route the software installation request to the configured approver based on the defined approval rules.
FR-7	Approval Decision Management	Allow authorized approvers to review request details and approve or reject the request with a decision or comments.
FR-8	Approval Notifications	Notify the requester and relevant approver about submission, pending approval, approval, or rejection through configured notifications.
FR-9	IT Fulfillment Management	After approval, route the request to the designated IT fulfillment group or assigned fulfiller for review and installation.
FR-10	Request Status Tracking	Allow employees to view their submitted request and its current status, including approval and fulfillment progress.
FR-11	Installation Completion	Allow authorized IT staff to update fulfillment progress and record installation completion or the reason the request cannot be fulfilled.
FR-12	Administrative Management	Allow authorized administrators to maintain catalog information, assignment and approval configuration, and monitor requests.

Non-functional Requirements

Following are the non-functional requirements that describe the expected quality attributes of the proposed solution.

NFR No.	Non-Functional Requirement	Description
NFR-1	Usability	The portal should provide a clear, simple, and consistent interface so employees and IT staff can complete software requests and fulfillment tasks with minimal guidance. Forms and request status information should be easy to understand.
NFR-2	Security	The system should require authenticated access, apply role-based permissions, and restrict request information and approval or fulfillment actions to authorized users. Sensitive organizational information should be handled securely.
NFR-3	Reliability	The system should save request, approval, and fulfillment updates accurately and consistently. It should provide clear error messages and avoid duplicate or incomplete request records where possible.
NFR-4	Performance	Common actions such as opening the catalog, submitting a request, reviewing approvals, and viewing request status should respond within a reasonable time under normal usage.
NFR-5	Availability	The portal should be accessible to authorized users whenever the ServiceNow instance is available, with planned maintenance communicated where applicable.
NFR-6	Scalability	The solution should support growth in employees, software catalog entries, installation requests, approvals, and fulfillment tasks without requiring major changes to the overall design.
