PROJECT DESIGN PHASE – II

Solution Requirements (Functional & Non-functional)

Date	25-09-2026
Team ID	
Project Name	Software Installation Request Automation (ServiceNow)
Maximum Marks	4 Marks

Functional Requirements

Following are the functional requirements of the proposed Software Installation Request Automation ServiceNow Service Portal.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Software Request Catalog	Provide a standardized Service Catalog item for software installation; display request guidance and available software options as configured.
FR-2	User Access & Authentication	Allow employees to access the ServiceNow portal using their authorized credentials; display clear validation or access messages.
FR-3	Software Selection	Allow employees to select the required software from the catalog and view relevant software information where provided.
FR-4	Request Submission	Capture requester details, selected software, business justification, and required request information through a structured portal form.
FR-5	Request Validation & Record Creation	Validate required fields before submission and create a software installation request record with a trackable reference.
FR-6	Approval Workflow	Automatically route submitted software installation requests to the configured approver for review and decision.
FR-7	Approval Decision Management	Allow the approver to review request details and approve or reject the request; record the decision against the request.
FR-8	IT Fulfillment Task	After approval, make the request available to the responsible IT fulfillment team to review and carry out the installation.
FR-9	Request Status Tracking	Allow the requester to view the request and its current status, including approval and fulfillment progress.
FR-10	Notifications	Provide configured notifications to the requester and relevant approver or IT team for submission, approval decisions, and fulfillment updates.
FR-11	Installation Completion	Allow the IT team to update the fulfillment status and record completion details when the software installation is finished.
FR-12	Administration & Monitoring	Allow authorized administrators to manage catalog and workflow-related configuration and monitor software installation requests.

NFR No.	Non-Functional Requirement	Description
NFR-1	Usability	The Service Portal should provide a clear, simple, and consistent interface so employees, approvers, and IT staff can complete their tasks with minimal guidance. The software request form and status information should be easy to understand.
NFR-2	Security	The system should require authenticated access and apply role-based permissions. Request information and approval or fulfillment actions should be available only to the requester and authorized personnel as appropriate.
NFR-3	Reliability	The system should save software request details, approval decisions, and fulfillment updates accurately and consistently. It should provide clear validation messages and help avoid duplicate or incomplete request records.
NFR-4	Performance	Common actions such as opening the Service Portal, viewing the software catalog, submitting requests, and viewing request status should respond within a reasonable time under normal usage.
NFR-5	Availability	The Service Portal and software request workflow should be accessible to authorized users whenever the ServiceNow instance is available, with planned maintenance communicated where applicable.
NFR-6	Scalability	The solution should support growth in employees, software catalog entries, installation requests, approval tasks, and fulfillment records without requiring major changes to the overall design.
